## **Burn ISO Files with Active@ ISO Burner 4**

***LSoft Technologies presents Active@ ISO Burner 4, the latest edition of their powerful optical disc burning software.***

LSoft Technologies, a leading developer of disc utilities and other useful software, has just launched Version 4 of its Active@ ISO Burner software. Greatly extending upon the limited functionality of Windows' native ISO support, this powerful tool makes burning ISO images to disc easier, quicker and more reliable than ever. It supports all the common formats as well, including CD, DVD, HD DVD and Blu-ray, including both write-once and rewritable formats.

If you've ever downloaded an ISO file and wondered what to do with it, Active@ ISO Burner is the tool you need to turn the image into a physical disc. It is exceptionally easy to use thanks to its self-explanatory dialog and simple presentation of options. However, Active@ ISO Burner isn't just for beginners - it also offers a range of advanced tools for professional users who want to create dozens or even hundreds of discs quickly, efficiently and with minimal chances of errors.

Using Active@ ISO Burner couldn't be easier. All you need to do is enter the location of the ISO file or drag and drop an ISO file into the dialog. You can choose the burn mode and speed and the number of copies you want and then click Burn. When you select your target drive, some useful information will also appear, including the recommended write speeds for that drive. Usually, keeping the write speed on automatic will be just fine, but you can always lower it to minimize errors.

If you want to give Active@ ISO Burner 4 a whirl, download it completely free today from <http://www.ntfs.com/iso-burning.htm>.
