

Green Packet Berhad

## **GREEN PACKET IS STRONG IN THE MEA WiMAX SPACE**

Green Packet Berhad (Greenpacket), a leading developer of Next Generation Mobile Broadband and Networking Solutions, is receiving enthusiastic response from operators in the Middle East and Africa (MEA) region for its WiMAX products and solutions. Greenpacket has so far entered into as many as 15 WiMAX CPE (Customer Premise Equipment) trialing with operators from 12 countries in the region.

Greenpacket first established itself in the MEA region in 2007. Firmly committed to developing the MEA market, the Company formed a joint-venture with Saudi Economic Development Corporation (SEDCO) to set up Green Packet Networks W.L.L., operating out of Bahrain.

“This region accounts for approximately 23% of total WiMAX deployment globally and we foresee continuous and long term growth in the WiMAX space of this region,” said Kelvin Lee, Senior General Manager of Greenpacket.

WiMAX is Greenpacket’s strong suit and core business focus. The Company offers end-to-end WiMAX products, solutions and consulting services; and undertakes robust R&D around the technology.

“There is tremendous revenue generating opportunities for Operators to leverage on WiMAX given its market and subscriber growth rate globally. WiMAX has proven to be an attractive option for both greenfield and traditional operators in the MEA region wanting to provide last-mile reach. WiMAX presents the very attractive proposition of requiring low infrastructure investment, which is particularly ideal for the low-density demography in this region,” added Lee.

At the upcoming WiMAX Forum® Regional MENA in Dubai, which will take place from 23 to 24 June 2009, Greenpacket plans on a strong showcase to further build up its market traction. Throughout the two-day event, the showcase featuring the Company’s award-winning WiMAX CPEs and its intelligent Intouch Connection Management Platform (ICMP) will demonstrate session persistence, as well as uninterrupted connection and application usage as users move between WiMAX-WiFi networks. Greenpacket’s comprehensive range of WiMAX CPEs are field-tested on successful large scale commercial deployments including one of the world’s largest by Packet One Networks (Malaysia) Sdn Bhd.

“We look forward to partnering with more operators to support successful commercial deployments in the region. At the WiMAX Forum® in Dubai, we hope to deliver an experiential showcase to demonstrate the features and benefits of our products and solutions, We are also keen on the opportunity to engage with operators to investigate very specific and very individualised needs,” said Lee.

To discover more about Green Packet’s WiMAX devices and software, come visit us at the Green Packet Stand #5 at WiMAX Forum® Regional MENA, Movenpick Bur Hotel, Dubai.

###

About Green Packet:

Green Packet Berhad was founded in the Silicon Valley and has offices in eight markets worldwide. In 2000, Green Packet established its R&D and marketing centre in strategically located Malaysia. Today, it is headquartered near Kuala Lumpur

and listed on the Main Board of the Malaysian Bourse with over 630 employees. A leading developer of Next Generation Mobile Broadband and Networking Solutions, Green Packet's mission is to provide a seamless and unified platform for the delivery of user-centric multimedia communications and services regardless of the nature and availability of backbone infrastructures.

Green Packet has two key business pillars: Products & Solutions and Converged Communications Services. For more information, visit: <http://www.greenpacket.com>

#### About Green Packet Products & Solutions:

Green Packet's WiMAX CPEs delivers best-in-class performance and quality, wrapped in distinctive designs which have proven to be popular among Telcos and consumers alike. The complete range includes indoor (D-series), outdoor (O-series) and USB dongle (U-series) modems, is Plug 'n' Play and caters for the 3.5GHz as well as the 2.3GHz and 2.5GHz frequency bandwidth. Technology Marketing Corporation (TMC) had recently awarded Green Packet with two WiMAX Distinction Awards for its D-series and the U-series modems, affirming the Company's commitment to innovation in the WiMAX space.

Green Packet's ICMP is the industry's leading intelligent connection management solution. Aside from its seamless mobility feature, it offers operators an end-to-end solution designed to converge connection management, communication services and entertainment within a single client. It is designed to simplify and enrich the connectivity experience of users while giving operators the opportunity to increase ARPU.
