SQL-RD Release 20161006 Now Available

ChristianSteven Software is proud to announce the release of SQL-RD version 7.3 build 20161006

SQL-RD version 7.3 build 20161006 has been released. A number of enhancements along with software fixes have been included.

Enhancements:

Ability to use SSRS Linked reports

Universal Search: Reports living inside of a package will now return the name of the parent package, if applicable

Universal Search: Descriptions of schedules are now included

Snapshots: Can now be sorted by date

Smart Folder: Ability to create a smart folder by RDL name

Audit Trail: Additional logging has been added to the Audit Trail

SSRS Subscriptions: Now shown in alphabetical order when creating a new schedule

SSIS Custom Task: A new execution option has been added called DT Exec

Note: This requires the path for DT Exec to be entered within the System Paths under Options within SQL-RD

Issues Resolved:

Schedule Icons: Editing a disabled schedule will no longer change the icon to appear enabled

Exporting to CSV: When there are more columns of data than column headers an error will no longer cause the schedule to crash

Permissions: Users in a group can now see all schedules created by other users in the same group without an admin user assigning the schedules

Inserts and Constants: Now translate as expected when using in an email destination formatted to HTML
